

- [26] Sofla, S. J., & Rafsanjani, H. H. (2020). The value of the power law index, n , describes the rheology of the fluid where for Newtonian fluids $n = 1$ and $n \neq 1$ represents non-Newtonian fluids. The values of the flow indices indicate that for Newtonian fluid there is a linear relationship between shear rate and shear stress. *SN Applied Sciences*, 2(12), 1-10. <https://doi.org/10.1007/s42452-020-03561-w>

Gita Goudarzi was born in Tehran, Iran, on January 16, 2000. She received a Bachelor of Science degree in mechanical engineering from Sharif University of Technology, Tehran, Iran, in 2023. Her major field of study was bio heat transfer, and her BSc reserach Project focused on heat transfer in the human body under supervision of Dr. Bijarchi and Dr. Sadrhosseini.

She has gained valuable work experience as a member of Iran's National Elites Foundation at Iran University of Science and Technology, where she was involved in designing and building pressure sensors. She also interned as a Mechanical Engineer at Ahansan Company, contributing to the design and construction of pressure tanks and their equipment. Gita has served as a Heat Transfer Teaching Assistant at Sharif University of Technology. Her current research interests include bio heat transfer and thermal systems.

She won first place in student projects at the TEBIYAN ceremony at Shahid Beheshti University in 2015. She has demonstrated excellent teamwork and leadership abilities throughout her career.

Hani Sadrhosseini (Member, IAE) was born in Tehran, Iran, on December 10, 1977. She received the Ph.D. degree in mechanical engineering from Eastern Mediterranean University, Famagusta, Turkey, in 2010. Her Ph.D. dissertation was titled "Use of Magnetic Fields in Damping Convection and Controlling Dopant Segregation in Semiconductor Melts." She also received the M.Sc. degree in mechanical engineering from Eastern Mediterranean

University, Famagusta, Turkey, in 2005, with a Master thesis titled "Experimental Study of Fluid Flow in a Duct Filled with Porous Media." She earned her B.Sc. degree in physics from the Faculty of Science, Department of Physics, Shahid Beheshti University, Tehran, Iran, in 2000. Her major field of study was thermodynamics and heat transfer.

She currently works at Sharif University of Technology - International Campus. She has authored/co-authored several publications, including "Examination of a novel solar still equipped with evacuated tube collectors and thermoelectric modules" (*Desalination*, 2016), "Multi-objective optimization of regenerative ORC system integrated with thermoelectric generators for low-temperature waste heat recovery" (*Energy Reports*, 2021), and "Filtration of aerosol particles by cylindrical fibers within a parallel and staggered array" (*Microsystem Technologies*, 2016). Her current and previous research interests include thermodynamics, heat transfer, and the study of fluid dynamics in porous media.

Dr. Sadrhosseini has received several awards and has worked for various committees and publications.

Mohammad Ali Bijarchi received his Ph.D. degree and completed his postdoctoral program in mechanical engineering from Sharif University of Technology, Tehran, Iran, in 2020 and 2021. He is currently an assistant professor in the Department of Mechanical Engineering at Sharif University of Technology.

He has also worked as a visiting scholar at Harvard University, Cambridge, MA, USA, from 2017 to 2018 with Dr. Hadi Shafiee and Dr. David Weitz. His educational background includes a BSc and MSc in Mechanical Engineering from the University of Tehran, Iran, completed in 2012 and 2014, respectively. He is currently an Assistant Professor at Sharif University of Technology, Tehran, Iran. His research interests include AI in fluid mechanics and heat transfer, specifically physics-informed neural networks (PINNs), renewable energies such as energy harvesting and solar desalination, heat transfer including battery thermal management, heat transfer enhancement, and inverse heat transfer, and ferrohydrodynamics focusing on the dynamics of ferrofluid droplets and microfluidics. Among his notable publications are "Experimental investigation of the thermal management of flat-plate closed-loop pulsating heat pipes with interconnecting channels" (*Applied Thermal Engineering*, 2015), "Ferrofluid droplet manipulation using an adjustable alternating magnetic field" (*Sensors and Actuators A: Physical*, 2020), and "Hybrid paper-plastic microchip for flexible and high-performance point-of-care diagnostics" (*Advanced Functional Materials*, 2018). Dr. Bijarchi has been recognized for his contributions to the field with several awards and honors. He has also served on various committees and editorial boards, contributing to the advancement of knowledge and research in his areas of expertise.
