

public administration. The most correct procedural to disseminate the BIM method, method should be offering specific BIM courses for public offices. Is not so easy, due to the cost and the so few times assigned for upgrade the competences in the public offices. A balance between all the needs become urgent. The authors consider necessary to issue a simplified EN standard, which allows to align European States in the use of BIM and allow UNI (national law) to interface with regulatory compendiums at European level (and not international). The starting point must be the real conditions of the public works offices because the BIM become mandatory in Europe, only for the public works. It is also evident that is necessary to support the Public Administrations in the drafting of public tenders in BIM which, although they have increased exponentially (by virtue of the mandatory nature of BIM in public works), is always dressed on the need and not optimized.
